Published news text on GTL plant releases on ONE.KBP for suppliers (April 2022)

GTL Plant Approvals

Dear Business Partner,

we are currently in the rollout of the GTL process in the VW Group and thus the active use of the Global Transport Label. We ask for your active cooperation in these approval processes. If you are the wrong con-tact person, please forward this message to the responsible person in your company.

For this purpose, the plants will check the data quality (VDA 4987) and the quality of the labels (VDA 4994) with their suppliers and, if the result is positive, issue so-called plant releases. These plant approvals are primarily valid for the respective plant.

The plants reserve the right to initiate a so-called GTL Group approval by the Logistics Processes competence team.

The current Volkswagen guidelines for VDA 4987 DESADV and VDA 4994 GTL can be found before logging on to <http://www.vwgroupsupply.com> under "Cooperation -> Communication -> Electronic Data Interchange (EDI) -> Dispatch". The TSB generator provided free of charge by Volkswagen is available for the creation of the transmission documents accord-ing to VDA 4939 and the labels. This can be found after logging in at <http://www.vwgroupsupply.com> under "Information -> Business areas -> Logistics -> TSB Generator". If you have any basic questions about VDA4994, TSB Generator, VDA4939, please contact our support team at the following address:

E-Mail: discovery@volkswagen.de

Tel.: +49 5361 9-46255

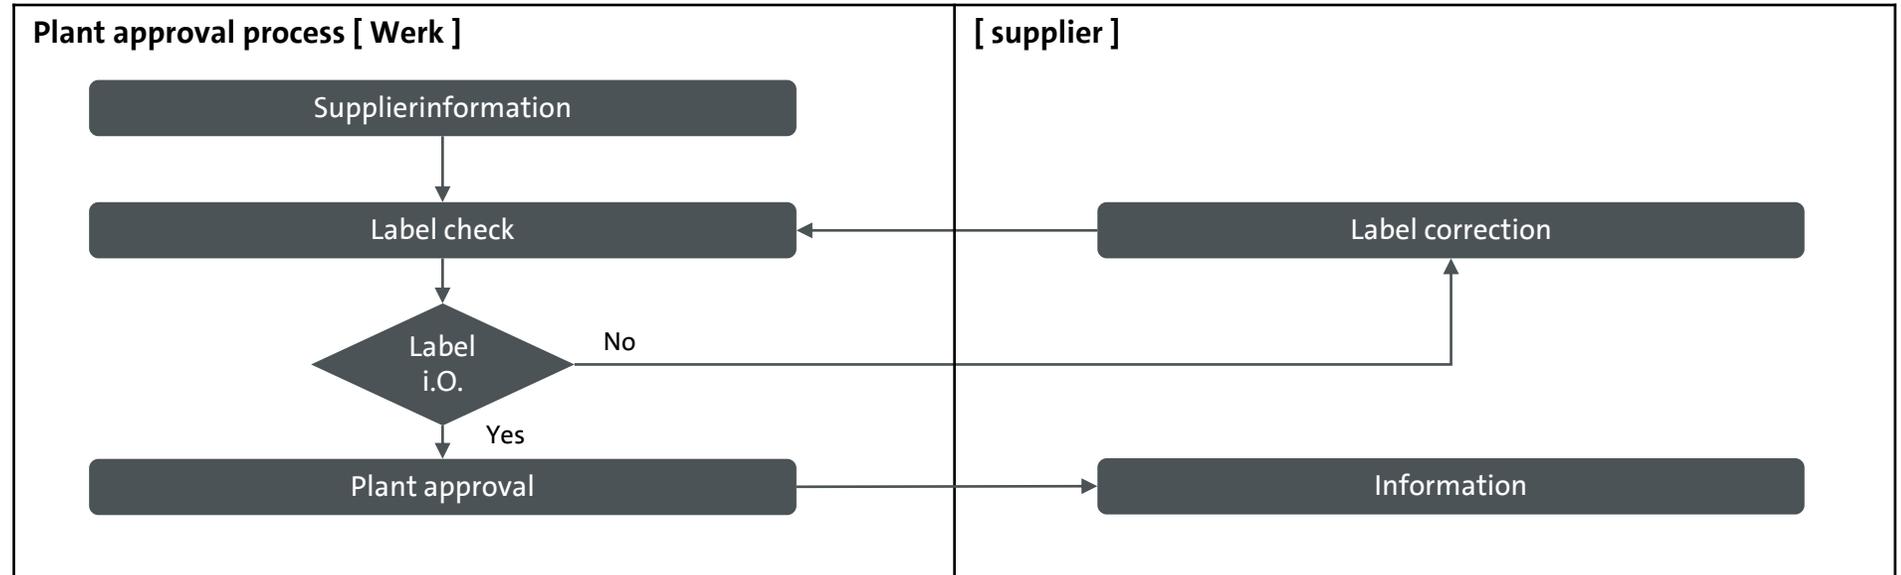

With your support, we are one step closer to the digital future every day!

Yours sincerely,
GTL Working Group

Global Transport Label

Group- and plant approval process – process since 19.04.2022

Leading process

Additional approval process.
Initiation by the plant
