1 Preface

The VDA 4921 contains delivery data regarding the transportation of goods to the customer/goods recipient by the regional freight forwarder. This delivery data is based on the ASN (VDA 4913 or DESADV), which the supplier sends directly to the customer. The transport information is used to simplify the process of recording the receipt of a freight carrier's full cargo.

At VOLKSWAGEN, the VDA 4921 is also used to aid the tracking of material/transport flows for the following processes:

1. KCC (Group Consolidation Centre)/cross dock
2. AMES-T (Advanced Mobility Engineering and Services for Transportation) and
3. Container yard (special process at VW Commercial Vehicles, Hannover).

For this reason, the VDA 4921 used at Volkswagen AG differs from that recommended by the VDA in the following respects:

- ✓ Record type 751 has been supplemented by item 08, process identifier for the KCC and AMES-T process.
- ✓ Record type 752 has been supplemented by item 11. In this item, different transport phases are transmitted in encoded form.
- ✓ Additionally, internal VW code lists are used in a number of cases. These code lists are documented in the guide.

The various processes are depicted in the following diagram (with the exception of the container yard process).

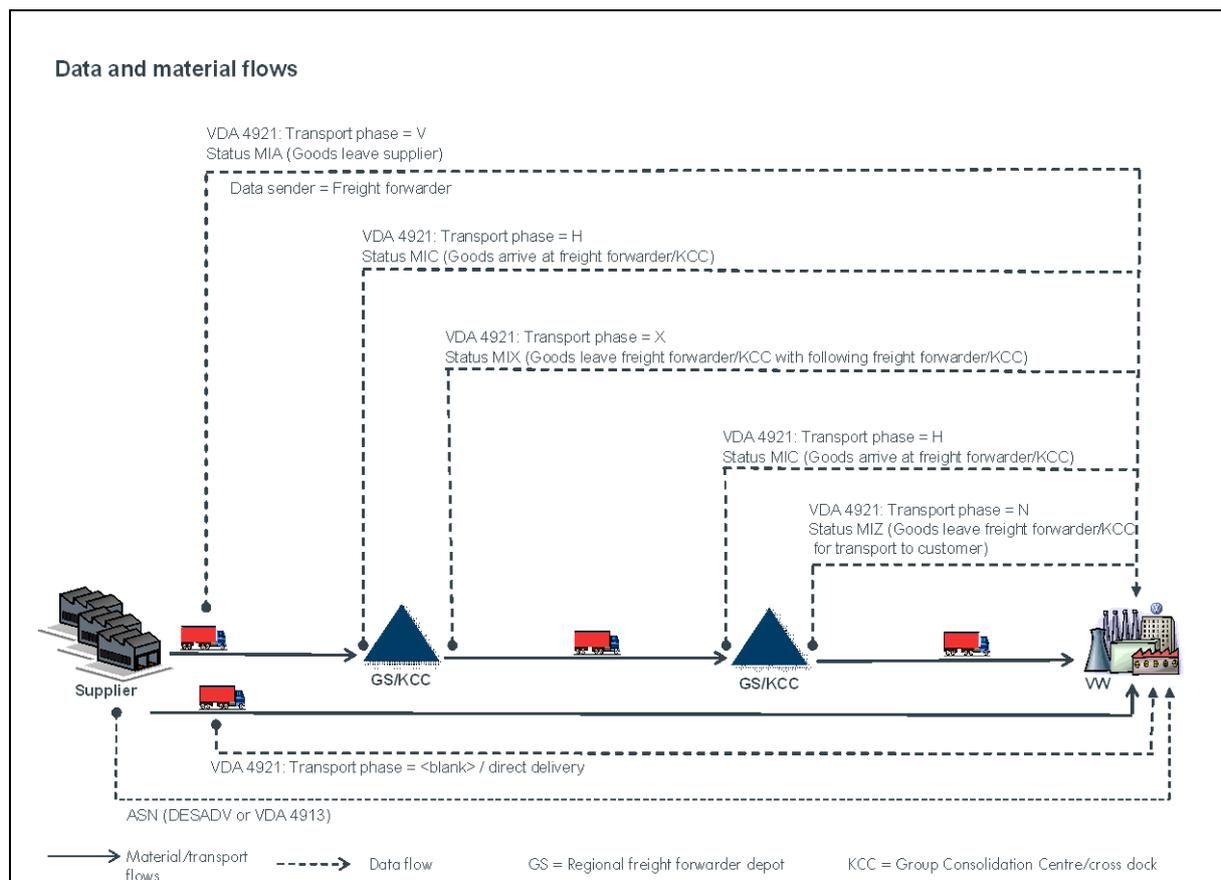

Figure 1: VDA 4921 process overview

For the purpose of tracking material and transport flows, the regional freight forwarder (GS) or KCC operator sends a VDA 4921 to VOLKSWAGEN for each transport phase (collection of material by haulage firm “V” and transport to KCC “H”, handling in KCC, transport of material to factory “N”). When the shipment arrives at the GS/KCC, the GS/KCC operator sends VOLKSWAGEN a VDA 4921 with the status MIC (H) regarding the shipment received (see figure 1). After a new shipment has been assembled for a recipient, the GS/KCC operator creates a second VDA 4921 with the status MIX (X) or MIZ (N) depending on whether the recipient is a GS/KCC operator or VOLKSWAGEN.

Sending the status MIA (V/goods leave supplier) is optional.

A new bordereau number must be sent when switching from one transport phase to another. The GS or KCC operator derives the ASN information (e.g. SLB, supplier number) from the delivery papers or the ASN which VOLKSWAGEN can provide to the GS or KCC operator.

If the item “transport phase” is not filled in, it will be assumed that this is a transport to the customer.

Additionally in the KCC process, the number of the freight forwarder carrying the shipment is always entered as the data recipient. This allows the information regarding the freight forwarder to be entered into the corresponding logistical systems at VOLKSWAGEN.

In the container yard process, the receipt of material at the container yard is recorded using the VDA 4921 (see figure 2).

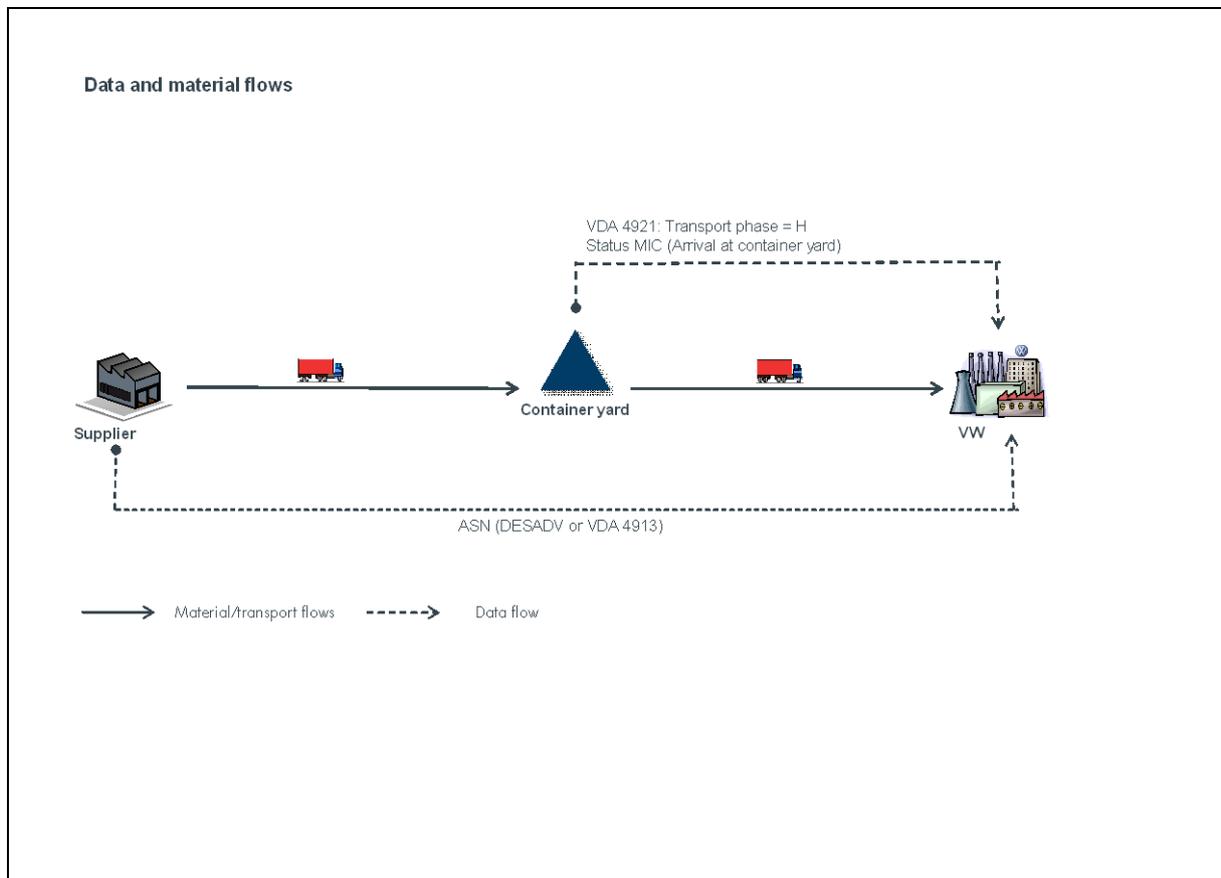

Figure 2: VDA 4921 process overview: Container yard

1 Change list

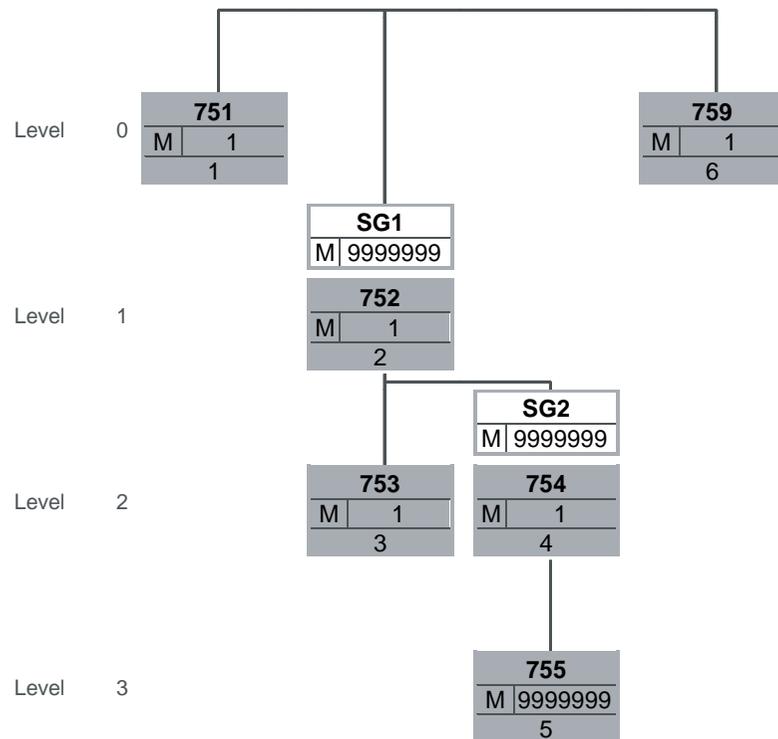

Date	Version	Description	Record type_line number
2015-10-16	1.1	Rule regarding identical plant numbers in a Bordereau added.	754_13

2 Message Type

Tag	No	St	MaxOcc	Name
751	1	M	1	Header record
SG1		M	9999999
